

EDGE OUT THE REST

Chamfer Dust Hood DGH 130

Built specifically for the Hilti professional finishing grinder DGH 130, the innovative chamfer grinding shroud helps create smooth, clean 45° beveled edges on any concrete column, wall, curb, or slab by providing accurate sizing, ease of use, and dust control in one flexible system.

APPLICATIONS AND ADVANTAGES

- Virtually dustless grinding
- Precise control with use of an exchangeable clip-in guide for exact chamfering
- Carbon-fiber-reinforced construction to withstand tough jobsite conditions
- Continuous rim cup wheel use reduces the risk of chipping the concrete

When used together with Hilti's new continuous rim, turbo-style diamond cup wheel, fast removal of overpour and a smooth finish are at your fingertips. Pair it with a compatible Hilti vacuum for an OSHA 1926.1153 Table 1 compliant dust control solution.

With the ability to quickly switch between vertical and horizontal dust hoods, you can expect to get precision-sized chamfered edges with our replaceable clip-in size guides. To bring a stunning shine to surfaces, simply swap out our grinding cup wheels with Hilti-exclusive diamond-embedded finishing pads.

For every wall, from form to finish, the DGH 130 with the new chamfer shroud and turbo cup wheel will help you solve the toughest grinding and finishing projects on your jobsite.
